Agile Business Analyst® Practitioner

AGILE TRAINING

COURSE OVERVIEW

Master the role of Agile Business Analyst with the Agile Business Analyst Practitioner training and certification. Introducing an agile approach has a significant impact on the role of the Business Analyst, their existing skills, and their way of working. Whilst traditional skills are still valuable, new skills and ways of working need to be adopted to harness the benefits of a new way of working and to appreciate the different relationships with co-workers and stakeholders. AgileBA guidance offers useful, practical and comprehensive guidance on the role of the Business Analyst working in an agile way (the Agile Business Analyst).

The Business Analyst is a critical role within an agile project team, and with more and more organizations adopting agile approaches, we need to ensure those performing this crucial role have the necessary skills and expertise. The AgileBA syllabus and exams are based on the AgileBA Handbook (published by the Agile Business Consortium). The Handbook offers the first comprehensive set of guidance, framework, and practices for the business analyst working on an agile project.

The AgileBA® Practitioner training and certification program has been designed to give the Business Analyst the skills needed to successfully gather, analyze, validate, and champion the requirements throughout an Agile project. It also gives context to the Agile Business Analyst role beyond the individual project in relation to organizational mission and strategy, providing additional depth and guidance for business analysis in an agile context.

COURSE SUMMARY

Certificate:
AgilePM Practitioner (APMG International)

Course Format:
Classroom, Virtual or Self-Paced

Course Duration:
Classroom: 2 days
Virtual: 3 days (2x2-hours a day)
