

Certified IT Asset Manager

Overview

You will learn about the entire ITAM Program and take with you the foundation plan for starting or improving your organization's ITAM Program.

The primary purpose of this course is to educate ITAM professionals to manage IT assets while aligning with the organizational business drivers that promote ROI, reduces risk and increases productivity. By attending this course the attendee will be able to understand and utilize the dependencies, relationships and benefits of the KPAs found within an effective IT Asset Management Program.

Value Proposition

- ✓ The ability to create a high-functioning IT Asset Management program
- ✓ Skills necessary to enhance your ITAM program with continuous improvement
- ✓ Ability to look critically at every aspect of your organization in order to bring them in line with your ITAM program's standards

What You Will Learn

The Scope of the IT Asset Manager

Learn who you should report to, what your responsibilities will be and what your main points of concern are likely to be.

ITAM Program Behavior

Find out what your own ITAM program might look like and how it should interact with the rest of your organization.

Program Priorities

Learn how to identify your program's specific priorities and how to set goals to accomplish them.

...and much more!
